Appendix-3: Feedback

Neville Albuquerque: Greetings ma'am. The product is finished, and I would like to know your thoughts about it and its ability to satisfy your needs.

Hema Rajan: After your introduction and training for the application, it appeared straight forward. The attendance recording feature for teachers doesn't appear complicated which is good considering some teachers are less proficient in technology. Nonetheless, I feel the user interface could be more intuitive rather than how drab and no-frills it is.

NA: I understand, however, due to time constraints I couldn't create such an interface as the application's functionality itself had taken quite a while to make. Hence the design. This is indubitably a major improvement that can be done for the application.

HR: The slots system made into this attendance system is accurate and representative of what we have implemented within school too. Well done on that. Visually speaking I also feel that seeing the word "Label" just written randomly on the application appears a little ugly despite confirming responses, which could be taken care of as well.

NA: Noted. Anything else that you feel might be worth considering for improvements?

HR: I felt that I should be able to reorder data too. Now you have used sample data without alphabetical order. In our administrative documents, all students are kept in alphabetical order and finally some students that join midway through the year or later are added in the end.

NA: Right ma'am.

HR: And I think this product can be further expanded on by perhaps allowing it to be used on smartphones. Most teachers today use their smartphone for communication with me or the principal for that matter. Hence, it'd be counter intuitive for them to perhaps use the computers to simply mark the attendance. Optimizing the experience for a smartphone would go a long way in perhaps solving this issue.

NA: True, this is definitely a part of this product's extensibility. Do you see any other feature that must be expanded on to further build the product's extensibility?

HR: I feel it would be helpful to accommodate towards late attendees as they report directly to me. Now although I can create a teacher's account and then do the same, I feel it could help to have the administrator having the attendance recording abilities.

NA: Yes ma'am. You're right. Is that all?

HR: That's all I can come up with as such.

NA: Alright ma'am, thank you so much.
